HITL Design Insight

HITL Design Insight — P2S

Manage Service Delivery Resource Demand (5.2.1, 65% Human at M3) covers monitoring the delivery pipeline, developing baseline demand forecasts, collaborating with customers and sales on consensus forecasts, determining skill availability against current and forecast orders, and monitoring and measuring forecast accuracy. Classified as a Knowledge process: demand consensus and forecast revision are judgment-heavy, cross-functional activities even though baseline forecasting itself is statistically generated. **Create and Manage Resource Plan** (5.2.2, 65% Human at M3) covers maintaining the skills taxonomy, creating the resource plan, matching resource demand against capacity and skills, collaborating with suppliers and partners to supplement capacity, and identifying critical resource and capacity constraints. Also classified Knowledge-dominant: capacity-matching and supplier collaboration require ongoing judgment, even as algorithmic optimization handles the underlying plan generation. **Initiate Service Delivery** (5.4.1, 40% Human at M3) covers reviewing the contract and agreed terms, understanding and refining customer requirements, revising and approving the project plan, confirming environmental readiness, and identifying, selecting, and assigning delivery resources. Classified as a Document process: the work is dominated by structured contract and project-plan review and approval. **Execute Service Delivery** (5.4.2, 65% Human at M3) covers analyzing the customer environment and needs, defining and validating the solution, routing changes for approval, and building and deploying the solution. Classified as a Knowledge process: solution definition and validation are the core value-creating judgment work of the entire engagement, carrying the highest M1 baseline (80%) of any P2S step. **Complete Service Delivery** (5.4.3, 35% Human at M3) covers conducting the service delivery review, finalizing financial management activities, confirming delivery against contract terms, releasing resources, harvesting knowledge, and archiving records. Classified as a Transaction process: closeout activities are largely procedural and system-of-record driven. P2S aggregate at M3: **54.0% Human / 46.0% AI** — reflecting P2S's engagement-lifecycle character: resource planning and solution execution remain Knowledge-dominant, judgment-heavy work, while contract initiation and delivery closeout lean more procedural, giving the module a mid-range M1→M3 gap (-19.0pt) that sits closest to P2M's blended profile among the modules built so far.

HITL Impact Analysis

H% = Human involvement at each maturity level · M3 = HITL Design Intent · ★ = Design target

Process Step (L3)	PCF	Pattern	M1 H%	M3 H% ★	Δ M1→M3	Opportunity
