

PCF 7.0 — Move-to-Exit Value Stream

Role Assignment RACI — Reasoned-Match Methodology (Final)

This document defines role accountability for PCF 7.0's Move-to-Exit value stream (7.6.1–7.6.3). Each L3 process is assigned a single Accountable role, with supporting Responsible, Consulted, and Informed roles, following standard RACI convention. Every assignment is grounded directly in APQC's Process Classification Framework v8.0 activity-level (L4) detail matched against the Organizational Role Taxonomy's documented role responsibilities. No assignment is inferred from process names or titles alone.

One L3 (7.6.2, Manage Separation) was informed by a published offboarding process reference, which confirmed HR Business Partner Manager as the standard single owner for exit workflows — a design principle stated explicitly in that reference: offboarding fails most often when ownership is diffused across parties rather than held by one accountable owner. One L3 (7.6.3, Relocate Employees and Manage Assignments) reflects a confirmed specialist-role gap: International HR Management is a recognized distinct discipline that the current role catalog does not name, different in kind from a cross-functional boundary between two existing roles.

Every assignment below, including the single-owner value-stream pattern and the confirmed specialist gap, was reviewed and confirmed through direct subject-matter review rather than accepted as a first-pass result.

Value Stream Owner: HR Business Partner Manager (Managerial tier), consistent with the accountability tier principle that Value Stream Owner accountability sits at Managerial tier rather than Executive. HR Business Partner Manager is Accountable for all three L3s in this value stream — confirmed as the correct shape for Move-to-Exit specifically, not a sign of under-differentiation, since the published offboarding reference identifies single ownership as the design principle that prevents exit processes from failing.

PCF	L3 Process	R — Responsible	A — Accountable	C — Consulted	I — Informed
7.6.1	Manage Promotion and Demotion Process	—	HRBP Manager	Compensation & Benefits Manager	—
7.6.2	Manage Separation	HR Generalist	HRBP Manager	Compensation & Benefits Manager	Legal*
7.6.3	Relocate Employees and Manage Assignments	HR Generalist (logistics)	HRBP Manager (partial—see gap note)	—	—

**Legal is engaged only on escalation — contested or high-risk terminations — not as a routine participant in every separation. Payroll, IT/Security, and Facilities each run coordinated workstreams against a shared offboarding checklist (final pay, access removal, asset return) outside HR's accountability scope for this L3.*

PCF 7.0 — Move-to-Exit Value Stream

Role Assignment RACI — Reasoned-Match Methodology (Final)

Accountable Assignment — Reasoning

7.6.1 Manage Promotion and Demotion Process

Single leaf L3 with no L4 children. Its description spans both system design (a framework for advancing or demoting rank or position, covering horizontal, vertical, and dry promotion, and voluntary/involuntary demotion) and process administration. This is business-facing career-movement decision work, distinct from career development itself (7.3.3): Accountable is HR Business Partner Manager rather than Director of L&D. Compensation & Benefits Manager is Consulted, since promotions and demotions typically carry pay-band implications.

7.6.2 Manage Separation

Four L4 activities (manage retirement, manage leave of absence, manage offboarding, develop/implement outplacement) span administrative execution and higher-risk exit types, since the L3's own description explicitly includes discharges and layoffs alongside routine departures. That risk profile is why Accountable stays at HR Business Partner Manager rather than defaulting to a purely operational role: HR Business Partner Manager classifies the exit type and owns the overall workflow, a role confirmed directly by a published offboarding process reference showing this as the standard design pattern. Responsible is HR Generalist for administrative execution — record-keeping, checklist management, leave-of-absence and retirement paperwork. Compensation & Benefits Manager is Consulted for benefits continuation. Legal is Informed rather than Consulted: escalation-triggered only, on contested or high-risk terminations, not a routine participant in every separation. Payroll, IT/Security, and Facilities each run coordinated workstreams against a shared offboarding checklist for access removal, final pay, and asset return — outside HR's accountability scope for this L3, not omissions from it.

7.6.3 Relocate Employees and Manage Assignments

Single L4 child (manage expatriates). Accountable is HR Business Partner Manager for the employee-relationship and coordination side, with HR Generalist Responsible for relocation logistics — but this ownership is explicitly partial. International HR Management is recognized as a distinct specialist discipline covering expatriate selection, relocation, cultural adjustment, and repatriation, confirmed by published HR reference material describing it as a core function separate from general HR business partnering. The current role catalog does not name an equivalent specialist role. This is a confirmed gap for future catalog expansion, different in kind from 7.5.4's HR/Finance boundary: that was a genuine functional split between two existing roles, while this is the absence of a specialist role altogether.

Cross-Cutting Pattern

Move-to-Exit is the first value stream in this framework where a single role is Accountable for every L3 process. This is a confirmed structural finding rather than an artifact of the methodology: exit-process design literature identifies diffused ownership as the primary failure mode for offboarding specifically, which supports concentrated single-role accountability as the correct shape for this value stream rather than a signal of under-differentiation. This value stream also produced the framework's first confirmed specialist-role gap (7.6.3, International HR Management) — distinct from 7.5.4's cross-functional boundary, since no existing role in the catalog covers this specialist discipline even partially.

Scope and Methodology Notes

Every assignment in this document is grounded in real APQC L4 activity text rather than in process names alone. One L3 (7.6.2) was informed by a published offboarding process reference beyond APQC and the Organizational Role Taxonomy. One L3 (7.6.3) reflects a confirmed specialist-role gap in the current role catalog rather than a resolved assignment. All three assignments were confirmed through direct subject-matter review rather than accepted as a first-pass result. This same methodology will be applied to the remaining cross-cutting PCF 7.0 group and future domains.
